Applied Channel Theory Integrating Palpation, Physiology and Point Selection Dr. Jason D. Robertson, DAHM, MS, EAMP

Friday 2nd-Saturday 3rd-Sunday 4th October 2020
9,00-13,00 14,00-18,00
(Friday starting time: 10,00)

Location: Centro Devadatta, via Privata Turro N°6- Milano (Italia)

The seminar, with a limited number of participants, will be open to acupuncture doctors and students of recognized acupuncture schools, with the prerequisite of having already participated in seminars of study of the method and/or having read and studied the text of Wang Juyi and Jason Robertson, Channel applied theory in Chinese Medicine

This three-day class series will focus on bringing material from the text *Applied Channel Theory in Chinese Medicine* to life in the clinic. The first day will involve a review of the diagnostic palpation techniques pioneered by Beijing professor Wang Ju-yi (王居易). In this first day, students will consider and practice techniques for gleaned clinically relevant information from the distal channels below the elbows and knees. Practice will be interactive and will involve abundant hands-on practice.

The second and third days of the series will describe techniques for integrating palpation with classical physiology. By first considering patterns of healthy physiology as described in formative classical texts, a system will be described which will allow for flexibility and innovation in the modern clinic. By combining models of six-level physiology (and later pathology) from early texts with a reliable palpation technique, students will be able to move beyond protocols and 'experience points' to a clinical approach more suited to the complex and changeable patterns of the modern clinic.

During the advanced portion of the class, each of the six channels (六經 *liù jīng*) will be considered in turn with discussions of physiology, common patterns of modern pathology and discussion of effective point pairings based on diagnosis. In many cases, detailed point locations will also be described from the work of professor Wang.

Subjects covered will include:

Day One-

- Channel Diagnosis. Introduction, demonstration and hands-on practice of diagnostic technique. This will involve palpation practice and precise location of the pathways of all twelve regular channels below the elbows and knees.

Days Two and Three-

- Discussion and demonstration of strategies for differentiating the primary channel in a given complaint and methods for choosing channels for treatment. This section will build a way of 'seeing' the body which utilizes systems described in the *Divine Pivot* section of the *Inner Classic* (內經 *Nèi Jīng*).
- Further discussions of physiology will include presentation of effective clinical point pairs. By considering effective point pairs in the context of the physiology they are designed to affect, students will gain an understanding of *why* they are choosing a particular clinical strategy. This approach will allow for flexibility and innovation when confronted with difficult cases.
- Further development of palpation technique through careful demonstration and practice of point location. This portion of the seminar will consider 30 of Dr. Wang's most commonly used points and the exact locations he uses in his Beijing clinic.
- Live patient demonstrations by the instructor including channel palpation and diagnosis with discussions of clinical strategies.

Coordinator: Dr Sergio Perini, UMAB director

team assistants : Dssa Giulia Boschi, Dssa Valeria Toso, Dr Giovanni Moretti,
